## MAZU PROFILER and FOUNDRY NETWORKS

Foundry customers know that their infrastructure is a solid foundation for running their businesses. Mazu Networks and Foundry Networks have teamed up to enable you to do more with your Foundry infrastructure.

### Do More With Your Foundry Infrastructure

Organizations today are faced with a complex set of challenges to ensure that their networks efficiently support business operations, are protected from security breaches, and support regulatory compliance requirements.

Mazu Networks and Foundry Networks have collaborated to integrate Foundry's sFlow with the Mazu Profiler to deliver a Network Behavior Analysis (NBA) system that works with the Foundry product family.

#### What is Mazu Profiler?

Mazu Profiler is an NBA system that provides real-time enterprise-wide visibility and control for:

- Internal security: stop malware and insider breaches
- Compliance: assess readiness, monitor security and policies, and audit
- Application availability: discover, profile, detect, and respond

#### How Mazu Profiler Works

Mazu Profiler is an appliance that passively listens to sFlow from your Foundry routers and switches. It builds and maintains a model of the behavior of all your applications, systems, and users. Mazu Profiler monitors real-time flow data and compares it to the model to assess risks and threats as well as adherence to usage and access policies. Profiler enables you to respond to threats and violations by quarantining hosts using your Foundry routers and switches.

### What Mazu Profiler Can Do For You

#### Internal Security

Mazu Profiler identifies potential security risks through real-time network service/asset discovery and monitoring. This enables you to identify unauthorized servers or services running on the network that could pose a security risk. Mazu Profiler provides real-time identification of insider breaches and malware and uses the Foundry routers and switches to quarantine hosts. Impact analysis ensures that you understand the impact of the response action before you take it. Profiler's reporting capabilities support broad forensic requirements to provide an audit trail of network and application activity.

#### Compliance

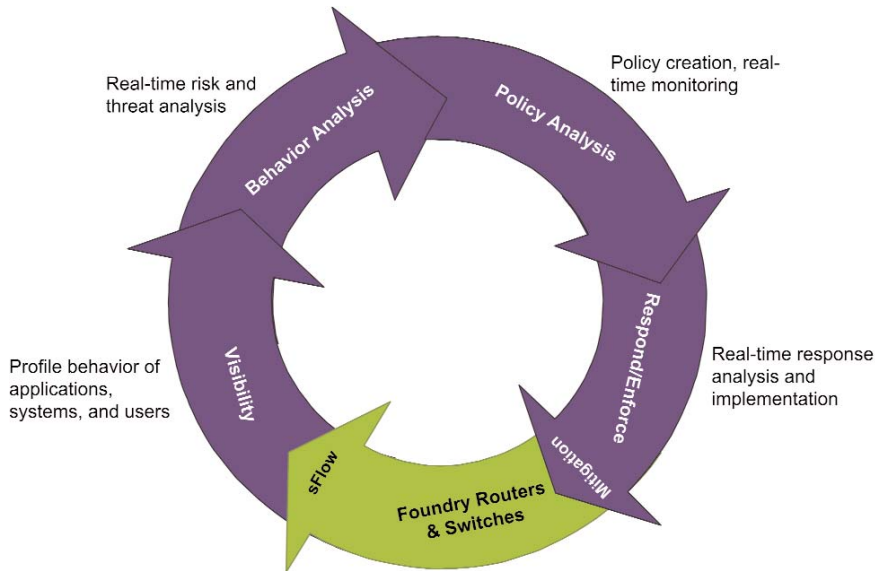

The visibility Mazu Profiler gives you into your network enables you to verify business and regulatory policies. It also provides the ability to enforce internal controls by ensuring that unsecured protocols are not used and by blocking inappropriate access to systems. Mazu Profiler provides historical records of connections to regulated servers and services anywhere in the network to support chain of evidence.

#### Application Availability

Mazu Profiler enables you to discover, profile, and monitor applications, giving you enterprise-wide visibility into application usage. Understanding application dependency both historically and in real time provides the ability to identify business processes at risk due to changes in network behavior, as well as to properly plan server consolidation or data center moves.

# MAZU PROFILER and FOUNDRY NETWORKS

Mazu Profiler delivers a system that provides enterprise-wide visibility into your network, enables real-time analysis of risks and threats, monitors adherence to policies, and enables you to respond to threats and violations using the Foundry infrastructure.

## About Us

### Mazu Networks

Mazu Networks provides behavior-based network security solutions that analyze network traffic and behavior to operate enterprise networks more securely. Mazu's offerings include:

- **Mazu Profiler™** – a Network Behavior Analysis (NBA) system that provides internal network visibility and protection and eases the IT burden of compliance.
- **Mazu Enforcer™** – a perimeter security solution that detects and mitigates denial-of-service attacks.

### Foundry Networks

Foundry Networks, Inc. (Nasdaq: FDRY) is a leading provider of high-performance enterprise and service provider switching, routing, security, and Web traffic management solutions including Layer 2/3 LAN switches, Layer 3 Backbone switches, Layer 4 - 7 application switches, wireless LAN and access points, access routers and metro routers. Foundry's 9,700 customers include the world's premier ISPs, metro service providers, and enterprises including e-commerce sites, universities, entertainment, health and wellness, government, financial, and manufacturing companies.
